PVC Panels in Ag Buildings

Designed for Today's Farming Needs

In recent years, there has been an increased interest in making agricultural buildings more sustainable and improving the well-being of domestic farm animals.

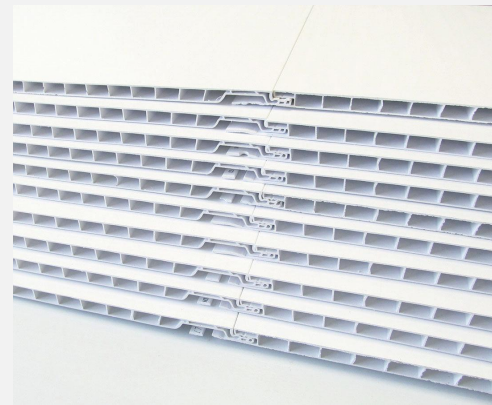

Whether for a new build or a renovation project, PVC panels are a widely used 'green' building material choice for farm buildings.

Corrugated PVC panels are one of those popular material choices. Agrilite® PVC corrugated liner panels are strong, rust-proof panels that naturally resist impact, chemicals, and corrosion. When it comes to swine and poultry barn environments, PVC liner panels are made to withstand harsh gases like ammonia, maintaining their strength and integrity over time.

KLAR® PVC corrugated panels are thicker than other corrugated PVC panels, offering superior rigidity and stability. Engineered with thermoacoustic multilayer technology, these high-performance PVC panels provide better thermal insulation

EZ Liner® PVC Interlocking Liner Panel

"Ideal for Wall & Ceiling Applications"

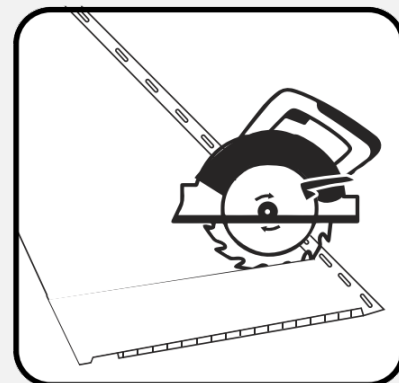

EZ Liner® panels are ideal wherever you need a smooth finish that is easy-to-clean, low-maintenance, hygienic and/or abuse resistant.

Cutting PVC Panels

What is the recommended method for cutting PVC liner panels?

performance over metal panels, creating a more stable and comfortable indoor temperature for livestock or stored crops. No thermal barrier needed!

For agricultural environments that experience a lot of humidity and require frequent cleaning like dairy barns and milking parlors, EZ Liner® PVC interlocking liner panels are highly water resistant and can withstand most chemicals commonly used in these facilities.

Modern farm buildings are being built to higher standards and look a lot different from those in the past. Improved engineering, materials, and construction methods ensure these structures will stand strong long into the future.

A: PVC liner panels can be fabricated on-site and require no special tools or training to install.

To cut panels to size, use a circular saw with a fine-tooth blade (12 to 16 teeth per inch) installed in the reverse direction (mounted backwards). Avoid coarse-toothed blades.

Cut on a flat and sturdy surface with the face of the panel facing downward. Use a ruler to make a straight-lined mark to follow. Move the saw slowly to prevent overheating or chipping.

Maintain even pressure while cutting, especially when completing a cut. Always do a test cut first to make sure your blade is cutting cleanly.

Upcoming Trade Shows

[World Dairy Expo | Sept 30th - Oct 3rd](#)

- Madison, WI
- Booth# TC 138 - 139

[Construction Rollforming | Oct 1st - 2nd](#)

- San Diego, CA
- Booth# 506

[Northeast Carwash Show | Oct 6th - 8th](#)

- Atlantic City, NJ
- Booth# 932

[METALCON | Oct 21st - 23rd](#)

- Las Vegas, NV
- Booth# 2035

[VISIT OUR TRADESHOW PAGE >](#)

If you plan on attending any of these trade shows, make sure to stop by our booth and say hello!

We'd love to hear about your next project and how we can partner together.

Company Highlights

AmeriLux Acquires MacCourt Products, Inc.

De Pere, WI – AmeriLux is pleased to announce

Kurt Voss, CEO of the AmeriLux Family of

the acquisition of MacCourt Products, Inc., a respected leader in the building materials industry known for durable outdoor solutions such as basement window well covers, mortar tubs, and preformed ponds.

MacCourt will join forces with Shape Products, an AmeriLux Family of Companies (AFOC) entity. Together, the organizations will combine their manufacturing expertise, product offerings, and customer service capabilities to deliver an even broader range of high-quality products to customers nationwide.
