added architect Tim Fikkert to their Team. With an in-depth understanding of the design and building processes, Tim will work with architects and engineers in specifying polycarbonate for use in daylighting applications.

If you have questions for Tim, please feel free to contact him at tfikkert@ameriluxinternational.com.

Polycarbonate to the Rescue

"The Garfield Park Conservatory sustained catastrophic damage in the June 30, 2011 hailstorm, shattering approximately half of the glass panes in the roofs of the historic Fern Room, Show House, and ten propagation greenhouses. The glass panes in the Desert House also sustained significant damage. The pathways, ponds, and plants in the Fern Room, Show House, Desert House, and propagation houses are covered with broken glass and shards of glass hang dangerously from the roofs. Until the roofs are repaired, rain will cause the ponds to overflow, and direct sunlight will destroy and kill the plants that have been so carefully and lovingly conserved for so many years."

The product chosen as the temporary reglazing solution was clear, LEXAN* Thermoclear* Plus 8mm twinwall polycarbonate. This reglazing job required approximately 20,000 square feet of polycarbonate sheet material. The total cost for this installation was over \$300,000. Underland Architectural Systems, a glass and glazing contractor located in Lynnwood, IL was the installer. This conservatory is over 100 years old, so they are required to rebuild it with "the original product," which is glass. In the meantime, they chose the best alternative glazing product available to get them through the winter months. The replacement glass will be installed in the summer of 2012.

8mm Thermoclear* Plus is just one of the many LEXAN* brand polycarbonate products superior to all others in the marketplace today. This product is UV protected on the exterior side and has a Dripgard, anti-condensate feature on the interior side. Lexan* Thermoclear* Plus carries a warranty against yellowing with no more than 2% light transmission loss over 10 years, compared to the standard in the market which is 6% loss of light transmission. If you would like samples or have additional questions about this product, contact us at 888-602-4441 or visit our website at www.ameriluxinternational.com.
