Polycarbonate Wall Dividers

"Translucent Panels Create a Modern Architectural Look"

Located in Burbank, CA, The POINTE is a 14-story "LEED Gold certified" office building developed by M. David Paul Ventures and the Worthe Real Estate Group. FreMantle Media, one of the world's largest international creators and producers of entertainment brands, recently joined the high-rise's list of entertainment industry and new media tenants.

Shubin + Donaldson Architects, Santa Barbara, CA, designed the 72,328 square foot leased office space for FreMantle. The design-based architectural practice specializes in developing livable environments with a refined sensitivity towards sustainability. Commercial general contractor Sierra Pacific Constructors, Woodland Hills, CA, oversaw the two-floors of construction.

Subcontracted by SPC, Pooles Construction, Inc., Anaheim, CA, began working on the FreMantle project in the "pre-construction phase", developing pricing for different construction schemes which helped the tenant drive design and make budget decisions.

The architectural design team was looking for a cost saving, translucent wall panel option to traditional glazing combined with visual appeal. The high quality, low cost, partition wall solution: **LEXAN™ THERMOCLEAR™ 10mm clear twin wall polycarbonate panels.**

Build a customized room divider or partition with multiwall polycarbonate. Panels are easy to fabricate and install with basic carpentry tools.

Frequently Asked
Question

Q: What is LEED?

A: Leadership in Energy & Environmental Design (LEED) is a third-party building certification process developed by the U.S. Green Building Council. This green building certification program recognizes best-in-class building practices and is an

In this application, the design team deliberately left the framing exposed to view through the translucent panels. "The polycarbonate panels were screw fastened to the metal stud framing", said Jordan Poole, Vice President of Pooles Construction, Inc. "We maintained a ¼" reveal between all panels and a uniform screw pattern throughout since the fasteners were visible." This simple yet impressive design technique of integrating the clear multiwall panels with the framing members added dimension and a clean, modern, architectural look. Light permeates the panels while still offering privacy. The use of light transmitting polycarbonate panels allows daylight to penetrate the interior rooms of the office space, saving on the use of artificial lighting during the day.

Available in various sizes and thicknesses, multiwall polycarbonate panels also offer outstanding sound insulation. Many office buildings, commercial facilities, government structures, and residential buildings design partition walls with polycarbonate panels because of the material's sound control qualities.

Add a touch of architectural design and class with a polycarbonate room divider or partition. At AmeriLux, we provide expert consultation to match the most appropriate product with your exact design requirements. [Click here to contact a member of the A-team to learn more.](#)

Employee Spotlight: Bonnie Brien

"A Workability Attitude"

Bonnie Brien joined AmeriLux in February of 2014, overseeing office housekeeping and landscape maintenance. Since then, she has taken on the additional responsibilities of fulfilling install component orders for one of

internationally recognized standard for measuring building sustainability.

LEED is a performance-based rating system. The system measures a building using several metrics including energy savings, water efficiency, sustainable land use, improved air quality, and stewardship of natural resources. Certification is based on total number of points earned out of 100.

Buildings achieve certification by submitting an application to the Green Building Certification Institute for review. If all requirements are met, the GBCI awards LEED certification. The four levels of certification are: Certified, Silver, Gold, and Platinum.

Getting the job done right is just one part of working effectively in a team environment.

Having the right attitude is an equally important aspect. Bonnie possesses this "workability attitude". She is not only conscientious of the importance of accuracy in her work; she also brings a "can do" positive and friendly attitude to work every day.

When asked what the most important aspect of her job is, Bonnie replied with this answer. "Keeping the warehouse and office spaces clean and safe. Housekeeping is not just about cleanliness. It reduces accidents, improves morale, reduces fire potential, and increases efficiency. It's about creating a pleasant and productive working environment for everyone."

"What can I help you with?" is a phrase often asked by Bonnie. Her caring attitude, willingness to help out when needed, and uncanny ability to get things done make her a valuable member of the AmeriLux A-team.

Dirty Girls Unite!

"Once a Dirty Girl, Always a Dirty Girl"

On August 16th, the ladies of AmeriLux and a few close girl friends participated in the 2014 Dirty Girl 5K Mud Run in Milwaukee, WI. This women's only mud run event supports Bright Pink, a non-profit organization that focuses on the prevention and early detection of breast and ovarian cancer.

Dirty Girl events inspire fabulous females to run, walk, climb, jump, and laugh their way, hand in muddy hand, to an unabashed sense of accomplishment. The ladies endured 3.1 miles of muddy terrain, 12 muddy
