

## Why Choose PVC Wall and Ceiling Panels? "Designed for Demanding Applications"

The use of PVC (polyvinyl chloride) plastic panels as a cladding material in the construction of residential and commercial buildings continues to gain in popularity. Strong yet lightweight, PVC panels are now available in a wide variety of designs, colors, sizes, and lengths, offering architects and designers an array of sustainable building solutions. High quality products like the interlocking [EZ Liner™ PVC liner panel](#) and the corrugated [Agrilite™](#)

[PVC liner panel](#) are being used more and more in today's most demanding interior applications.

An ideal replacement for conventional wall or ceiling systems, EZ Liner™ is a PVC based polymer product manufactured in Canada using 100% virgin lead free material. This extremely durable PVC plastic panel is safe to work with when using normal construction practices and the waste material is recyclable.

Stocked in a bright matte white and available in custom colors, the panel's corrosion resistant surface is highly water resistant and can withstand most chemicals commonly found in agricultural and vehicle wash facilities. The EZ Liner™ panel complies with the National Building Code of Canada and the International Building Code as well as meets all FDA and CFIA requirements for indoor use.

Unique to EZ Liner™ is an all-weather interlocking system that allows for necessary panel contraction and expansion due to temperature fluctuations. Completing the system is a full line of trim pieces that help make the installation quick and simple, providing an attractive finished look. Wherever you need a smooth finish that is easy-to-clean, low-maintenance, hygienic, and abuse resistant, EZ Liner™ is an ideal wall or ceiling panel choice.

A great economical alternative to metal panels, Agrilite™ PVC liner panels are strong, rust-proof panels that naturally resist marking, scratching, and many harsh chemicals. The

high gloss white finish reflects light well and helps to brighten the interior of buildings like warehouses, factories, stables, hog barns, and dairy sheds.

Available in a corrugated (Greca or 9") profile, these minimal care PVC plastic panels are easy to install and require no special equipment or training. Because Agrilite™ liner panels are light in weight, they are simple to transport, handle, and fabricate on-site. Panels can be cut using basic woodworking

tools.

Owners of agricultural and light industrial buildings regularly choose the virtually indestructible Agrilite™ PVC wall and ceiling liner panel for its high impact strength, ease of installation, cleanability, and outstanding versatility.

Looking for a great paneling option to painted drywall, plywood, plasterboard, tile, or stainless-steel? Cost-effective when compared to these conventional materials, the [EZ Liner™ PVC interlocking liner panel](#) and the [Agrilite™ PVC corrugated liner panel](#) may be used in both new construction and retrofit applications.

## Featured Product

### EZ Liner™ PVC Interlocking Liner Panels

EZ Liner™ panels are ideal wherever you need a smooth finish that is easy-to-clean, low-maintenance, hygienic and/or abuse resistant.

Designed to interlock along one edge, the EZ Liner™ panel is mechanically fastened by screws to an existing wall, strapping, or roof structure through a slotted nailing flange along the other edge. This tongue-and-groove interlocking system makes both vertical and horizontal installation quick and easy.

- Stock Color: Non-Glossy Bright White
- Sheet Width: 16" w/an overall thickness of 3/8"
- Sheet Length: 8', 10', 12', 16' and 20'
- Fire Rating: Class A Smoke & Flame Finish
- Hygienic Rating: Meets FDA & CFIA Requirements
- Warranty: 10-Year Limited Warranty

EZ Liner™ by EZ PVC is a PVC based polymer product that is manufactured in Canada using 100% virgin lead free material and comes with a full line of trims.

Ideal for cladding wall and ceiling surfaces, EZ Liner™ is highly recommended for the most demanding agricultural, industrial, commercial, and residential interior applications.

## DIY Tip of the Month

### Window Well Covers

Basement flooding, unsightly leaf pile-up, potential critter intruders, and dangerous falls may result from an uncovered window

## Polycarbonate Expansion & Contraction

**Q:** Do I need to be concerned about thermal expansion and contraction when installing my polycarbonate panels?

**A:** Most Definitely! Polycarbonate expands in hot weather and contracts in cold – about 1/32" per foot for 100°

well. These issues can be prevented by installing a do-it-yourself or a [prefabricated polycarbonate well cover](#).

Multiwall polycarbonate is a simple and cost-effective DIY option for making your own window well covers. This extremely durable material is strong and won't break easily. It can withstand flying stones, hail, and accidental impact.

Translucent in nature, multiwall polycarbonate well covers won't block the natural light from coming into your basement living space. The cellular structure of multiwall polycarbonate also provides good thermal and noise insulation.

Keep your window wells clean and safe for family and pets by installing high-quality polycarbonate window well covers!

**Note:** *Window wells are considered an emergency exit. Check with your local building authority on code requirements.*

of temperature change with the greatest amount of movement during the spring and fall months.

Because polycarbonate expands and contracts with temperature change, sheets should be installed between 55°F and 70°F. Allowance must be made for both the length and width of the sheet at a rate of .04" per foot per 100° temperature change.

Bronze polycarbonate sheets heat up faster requiring an additional 30% space to expand and contract.

Polycarbonate sheets that are installed in extreme cold or hot weather conditions (even if the holes are pre-drilled) may crack or warp when the temperature fluctuates between the seasons.

## PVC Wall & Ceiling Panels | Easy Care Tips

### Low Maintenance PVC Panels

PVC wall and ceiling panels never need to be painted, coated, or otherwise sealed. These easy to care for liner panels require minimal maintenance and can easily be cleaned by hand or basic power washing.

Regular removal of accumulated dirt and debris will help maintain the panels bright white appearance and prolong the life of your PVC liner panels.

It is important to read all product care information before cleaning your PVC panels. Use of incompatible products may cause structural or surface damage to the panel as well as potentially void the warranty.

### PVC Panel Cleaning Tips

- In dry areas, rinse panels regularly with clean lukewarm water.
- Hand wash with soft cloth/sponge and a mild cleaning solution.
- For hard to clean areas, use a small- to mid-sized pressure washer.
- Make sure to keep nozzle 4-6 feet away from wall/ceiling.
- Use a wide spray setting to distribute water pressure.

*Abrasive cleaning agents or pads should never be used as they may scratch the panel's surface!*

## Company Highlights

### Meet the A-Team

Employee Spotlight | Will Renner

A recent addition to the AmeriLux A-Team, Will brings with him a wealth of PVC product knowledge and a strong sales background in developing business relationships with distributors, dealers, architects, and contractors.

As a National Sales Manager for AmeriLux International, Will's main initiatives are bringing on and developing new partners, expanding on current opportunities, and helping the sales team win and grow business.

Will enjoys striving towards goals and creating a plan to accomplish them. "Being part of a growing company means working through change. I look forward to the challenge of making the greatest impact I can by overcommunicating, learning, and helping others."

*"I see tremendous potential within the products and opportunity to make a bigger impact on a great team."*

**This Month's Brand Ambassadors:**

*Driver Business Leader - AmeriLux Transportation*

### "We'll Be Even Better Tomorrow"

"We do the basics really, really well as a first priority, but we aren't comfortable with the status quo. We are always learning in the service of winning. We challenge ourselves to continuously pursue the next step in growth, personally and professionally. We don't settle for today's success but use the magic of momentum to keep building a more successful tomorrow. "It's amazing what's possible when you don't know what's impossible."

How We Succeed at AmeriLux

## The Car Wash Show™ 2021

AmeriLux International is exhibiting at the Car Wash Show, the largest gathering of owners, managers, and decision makers in the industry. The show provides valuable networking opportunities, relevant educational sessions, and knowledge of new products and technology. After almost two years apart, The Car Wash Show™ is a true industry celebration.

Make your carwash stand out from the competition with our high-quality multiwall polycarbonate sheets or PVC liner panels. **Come see us at Booth #959 for more product information.**

For show details or to register, please visit [www.TheCarWashShow.com](http://www.TheCarWashShow.com).  
Hope to see you in Las Vegas this November!
